B,

That's the last one I've seen

Gary Miller, P.E.
Remediation Project Manager
EPA Region 6 - Superfund (6SF-RA)
(214) 665-8318
miller.garyg@epa.gov

Kim:

The revised sample set, filtered by you following parameters supplied by Gary Miller through Patrice Miller, has been applied to the spreadsheets in the Casales Index for Contaminant Search workbook. The revised

workbook is attached.

Specifically, the following changes were made:

The **gen-mat-material** tab summarizes the barge contents by PRP with the number of analytic results available per material. The number of samples was revised as needed.

The **gen-mat-client** tab lists the number of barge cleaning events per PRP per barge contents. The number of analytic results from all media is listed next to the material carried in the barge. These numbers were revised per the filtered data.

The **client-contact** tab lists the PRPs with location information from the evidentiary documents and updated contact information, where available, from Internet sources. The spreadsheet also includes substances associated with the barge cleanings and the number of analytic results for each. This tab was previously revised to include the specific contact resources. In this revision, the number of analytic results is adjusted from the filtered data set.

The **mat-samples** tab lists each sample individually tested for a material associated with a barge cleaning. It includes the sample identifier, date, matrix sampled, and brief notes on the chemical name. The sample list was revised to show only those entries which are in the filtered data set.

The **Look-Ups** tab summarizes information from supplied documents. It was recently reviewed using the referenced PDF source files. Deletions are struck out, changes and additions are in red font, and a "Notes" column was added. While this spreadsheet does not list sample information, it is included because it has not been previously submitted to EPA.

In general, the filtering parameters requested by EPA decreased the number of samples listed per material, and in many instances decreased the number to zero. However, there were two exceptions: Methylchloroform (1 sample to 7 samples) and N-Butanol (0 samples to 3 samples).

Louise
